

Meet your new bodyguards. They work weekends.

Find out how ullium consulting can empower your business communications today

[Learn More](#)

Dear Brian,

ullium consulting, Inc and Cisco would like to introduce you to a big friend who can make maintaining the safety and security of your people, data and facilities much easier.

Cisco® security solutions for small business integrate physical, data, and network security, helping you to safeguard your network and business to:

- Protect your network against hackers and external attacks, so you can keep your connections up and running.
- Virtually eliminate email threats, so your email can be a productivity resource once again.
- Keep tabs on your workspace from anywhere with remotely-controlled IP cameras, and feeds that you can access.
- Provide data backups of your business critical applications and information.

Statistics show that if a business suffers a major disruption due to fire, theft, equipment failure or any other long-term disasters, they are 72% less likely to recover than those that have taken appropriate precautionary measures.

Don't become another statistic, call us today and we'll help you determine the best Cisco security options for your specific needs, so you can focus more on your business and less on security threats. Ask about the limited-time only financing offer available to qualified customers.

Peace of mind for your small business.
